Introduction to Microsoft Intune

Microsoft Intune

Microsoft Intune is a cloud-based endpoint management service that secures and manages your organization's devices and apps.

Use Intune to enroll, configure, secure, and update devices, deploy and protect apps, and control which users and devices can access organization resources.

Supported platforms include Android, iOS/iPadOS, Linux, macOS, tvOS, visionOS, and Windows.

The service runs entirely in the cloud, with no on-premises infrastructure required, and supports the Zero Trust security model.

**Why 2026 is a
turning point**

Why 2026 is a turning point

Windows 10 support ended October 14, 2025 — unpatched devices are now liability, not legacy.

Workforces are distributed; on-premises tools assume a corporate network that no longer exists.

Defender for Endpoint, Conditional Access and Zero Trust are orchestrated natively through Intune.

Microsoft 365 Business Premium already bundles Intune Plan 1, Defender for Business and Entra ID P1.

The question has shifted from whether to modernize to how quickly you can.

**What Microsoft
365 Business
Premium
includes**

Business Premium: included vs. add-on

Microsoft 365 Business Premium (about \$22 per user/month, up to 300 seats) already includes the full endpoint management foundation. The July 1, 2026 packaging change that folded advanced Intune Suite capabilities into E3 and E5 does not extend to Business Premium.

Included today

- Intune Plan 1 — device and app management
- Defender for Business — EDR and ASR
- Entra ID P1 — Conditional Access
- App protection policies for BYOD
- Windows Autopilot provisioning

Add-on if you need it

- Intune Plan 2 (about \$4/user/mo)
 - Remote Help, Advanced Analytics
- Intune Suite (about \$10/user/mo)
 - adds Endpoint Privilege Management, Cloud PKI, Enterprise App Management

Recommendation: exhaust what Plan 1 and Defender for Business already cover before buying an add-on. Confirm current pricing at renewal — Microsoft's 2026 packaging updates roll out per tenant.

Security, compliance and Conditional Access

Compliance that actually gates access

1

Define

Compliance policies set the bar: OS version, encryption, antivirus state, jailbreak status.

2

Evaluate

Every enrolled device reports continuously; drift is visible, not discovered at audit time.

3

Enforce

Conditional Access requires a compliant device before Microsoft 365 data is released.

4

Protect

App protection policies safeguard corporate data on BYOD without full enrollment.

The outcome: access decisions are made on device state, not on trust in the network.

Stay secure: the endpoint control plane

Security baselines

Deploy Microsoft-recommended configurations across Windows, macOS, iOS and Android from one console.

Defender for Business

Next-generation antivirus, EDR, attack surface reduction and automated investigation — included.

Identity protection

Entra ID P1 delivers Conditional Access and multifactor enforcement on every sign-in.

BYOD data protection

App protection policies contain company data on unenrolled personal phones.

Zero-touch provisioning

Windows Autopilot ships a configured, compliant device straight to the user.

Vulnerability visibility

Threat and vulnerability management flags exposed devices before they are exploited.

Modernizing legacy device management

Modernizing legacy device management

Migration is not a rip-and-replace. Move one workload at a time — whether you are leaving GPO, a third-party MDM, or Configuration Manager.

Group Policy analytics

Import your GPOs, see which settings Intune already supports, and migrate the supported ones directly.

Co-management

Still running Configuration Manager? Enroll in both and shift workloads on your schedule, piloting each first.

Third-party MDM exit

Enroll into Intune, prove policy parity, then remove the incumbent — never both enrolled long term.

**Your 90-day
action plan and
how we help**

A practical 90-day plan

Days 1–15

Establish the baseline

Inventory devices, OS versions and every overlapping security tool. Confirm your Business Premium seats and what each one already entitles.

Days 16–45

Turn on what you own

Enroll devices, deploy security baselines and app protection policies, and require compliant devices through Conditional Access.

Days 46–75

Prove it, then decide

Measure coverage and gaps. Only where Plan 1 and Defender for Business fall short, pilot the Plan 2 or Suite add-on on a small group.

Days 76–90

Consolidate and govern

Retire an incumbent tool only once operational gaps are closed. Set change cadence and ownership for Intune's monthly releases.

Five ways these projects go sideways

01 Assuming the E3/E5 news applies

The 2026 Intune Suite inclusion covers E3 and E5 only. Business Premium keeps Plan 1 — verify service plans in your own tenant.

02 Moving workloads before policies are ready

Shifting device configuration to Intune with incomplete policy parity is the most common cause of a failed rollout.

03 Treating pilots as temporary

Pilot collections need owners, exit criteria and monitoring — or they quietly become permanent.

04 Ignoring app modernization

Legacy packaging and outdated mobile app management components block enrollment and app launches.

05 No cadence for change

Intune ships monthly service releases. Without an owner watching them, drift becomes risk.

How Point Alliance helps

Entitlement review

We map what Business Premium already covers against every security tool you pay for, and quantify the overlap.

Readiness assessment

Device, application and policy readiness — including the Windows 11 estate — with a prioritized remediation list.

Enrollment & migration

We move devices off GPO or a third-party MDM, prove policy parity, then retire the incumbent.

Security enablement

Baselines, compliance policies and Conditional Access, configured to your risk profile and rolled out safely.

Autopilot rollout

Zero-touch provisioning so new and rebuilt devices arrive configured, compliant and ready to use.

Managed operations

Ongoing governance of Intune's monthly change cadence so your posture does not drift.

Let's find what you already own

Book a complimentary Intune entitlement and readiness review with our team.

We'll confirm what Business Premium already covers, flag overlapping spend, and tell you whether an add-on is genuinely warranted.
